SUMMARY

BCA graduate with strong skills in Advanced Excel, SQL, Google Sheets, and data analysis. Proficient in VLOOKUP, XLOOKUP, Pivot Tables, dashboards, and report preparation. Passionate about transforming data into meaningful insights and seeking an opportunity as a Data Analyst or MIS Executive to contribute to data-driven decision-making.

"Seeking a role to grow professionally and contribute my skills toward long-term advancement within the organization."

TECHNICAL SKILLS

Languages	: Python, SQL, Excel, C/C++, Java, Frontend developer.
ETL & Data	: ETL/ELT Pipeline Development, Pandas, NumPy, Data Cleaning & Transformation, REST API Ingestion
Databases	: MySQL, PostgreSQL, MongoDB (NoSQL), DBMS Schema Design, Query Optimization
Cloud Data	: Data Validation, Pipeline Monitoring, Error Handling, Structured Logging, Debugging
Quality Dev Tools	: Git/GitHub, Node.js/Express, Heroku, Netlify

PROJECTS

Python-Based ETL Data Pipeline

Personal Project | 2024

- Designed and implemented an end-to-end ETL pipeline in Python to extract data from REST APIs and CSV files, transform using **Pandas** (deduplication, null handling, type casting, schema validation), and load into **MySQL**.
- Automated data cleaning workflows and implemented structured logging for pipeline monitoring and failure alerts.
- Optimized SQL queries for faster data retrieval; maintained modular, reusable codebase with Git/GitHub version control.

Real-Time Weather Data Ingestion & Analytics App

Team Project | 2024

- Built a full-stack application that ingests live weather data from the **OpenWeather API**, storing structured JSON responses into **MongoDB** and **MySQL** databases for analysis.
- Developed backend data services with **Node.js/Express** to handle API calls, parse and transform responses before storage — demonstrating ETL principles in a real-world scenario.
- Implemented data validation checks and graceful API failure handling to maintain data integrity and pipeline uptime.
- Deployed via **Heroku/Netlify** with GitHub-based version control; collaborated on API integration, backend development, and deployment.

Flamex Gas Booking Application

- Developed a centralized LPG booking and management system for online cylinder booking and tracking.
- Designed SQL databases to manage users, bookings, payments, and distributor records.
- Built an admin dashboard for monitoring bookings, revenue, and customer data.
- Implemented booking status tracking and report generation features.
- Improved operational efficiency through structured data management and automated workflows.

EDUCATION

B.C.A. — Bachelor of Computer Applications | Shobhit University, Gangoh

CGPA: 8.25 / 10

10+2 — Science | Green Field Academy

CERTIFICATIONS & ACHIEVEMENTS

- SQL, MySQL, PostgreSQL & MongoDB** — Udemy Certification (core DB skills for data engineering)
- Artificial Intelligence** — IBM SkillsBuild Advanced IT Skills Program, ICT Academy (Grade A)
 - Basics of DevOps with CI/CD Pipeline Automation** — Daily E-Learning
- HTML Course** — Udemy | Daily E-Learning Certification
- Winner** — Tech Fest 2024, Shobhit University
- 2nd Position** — Ideathon, Techno Zoom 3.0, Dept. of C.S, Shobhit University
